→ Millions of Americans are living with serious illness, and this number is expected to increase exponentially over the next 20 years with the aging of the baby boomers.

→ At least 12,000,000 adults and nearly 400,000 children in the United States are currently living with a serious illness, and could benefit from palliative care.

→ Palliative care (pronounced pal-lee-uh-tiv) is specialized medical care for people living with a serious illness. This type of care is focused on providing relief from the symptoms and stress of the illness. The goal is to improve quality of life for both the patient and the family.

→ Palliative care is provided by a specially-trained team, including doctors, nurses, and other specialists who work with a patient’s other doctors to provide an extra layer of support.

→ Based on need not prognosis, palliative care is appropriate at any age and at any stage in a serious illness.

→ According to a 2010 study reported in the New England Journal of Medicine, lung cancer patients receiving palliative care had less depression, improved quality of life, and lived longer.

→ Illnesses most commonly treated by palliative care are heart disease, cancer, stroke, diabetes, kidney disease, Parkinson’s disease, and Alzheimer’s disease.

→ The top 5% of health care spenders accounts for 50% of total health care expenditures. People needing palliative care are among this group.

→ If palliative care was fully penetrated into the nation’s hospitals, total savings could amount to $6 billion per year.

→ Palliative care growth in hospitals has been exponential. As of 2019, 72% of hospitals with fifty or more beds report a palliative care team, up from 67% in 2015 and 7% in 2001.

→ Ninety-four percent of all hospitals with 300 or more beds have a palliative care team today.

→ Where you live matters when it comes to access to palliative care in the hospital. (See the State-By-State Report Card on Access to Palliative Care at reportcard.capc.org).

→ According to a 2019 poll conducted by Public Opinion Strategies, once informed about palliative care, 95% of poll respondents agreed that it is important that patients with serious illness and their families be educated about palliative care.

→ In the same poll, 90% of respondents said they would be likely to consider palliative care for a loved one if they had a serious illness. Ninety-four percent said it is important that palliative care services be made available at all hospitals for patients with serious illness, and their families.
Palliative Care
Frequently Asked Questions

What is palliative care?
Palliative care (pronounced pal-lee-uh-tiv) is specialized medical care for people living with a serious illness. It is focused on providing relief from the symptoms and stress of the illness. The goal is to improve quality of life for both the patient and the family.

Palliative care is provided by a team of doctors, nurses, and other specialists who work together with a patient’s other doctors to provide an extra layer of support. It is appropriate at any age and at any stage in an illness, and it can be provided along with curative treatment. Palliative care is based on need, not prognosis.

Approximately how many people in the U.S. need palliative care?
Approximately 12,000,000 adults and nearly 400,000 children in the US could benefit from palliative care.

What are the benefits of palliative care?
Palliative care focuses on improving quality of life by treating the symptoms, side effects, and stress caused by the disease and its treatments. The palliative care team of doctors, nurses, and other specialists spends time with a patient and their family to help them match their treatment options to their goals. And, recent studies have shown that patients who receive palliative care may live longer.

Who should get palliative care?
Palliative care is appropriate for anyone living with a serious illness and suffering from symptoms and side effects.

What is a serious illness?
Serious illnesses include cancer, cardiac disease, respiratory disease, kidney failure, Alzheimer’s, HIV/AIDS, amyotrophic lateral sclerosis (ALS), and many more.

How do you pay for palliative care?
Palliative care is billed in the same way as any other medical specialty (e.g. cardiology, oncology). Most insurance plans, including Medicare and Medicaid, cover all or part of palliative care.

Do patients have to give up their own doctor?
No. Palliative care teams work alongside the primary doctor.

How do you get palliative care?
Patients can ask their doctor for a referral to the palliative care team. Palliative care is available in most hospitals with more than 50 beds, and more and more in outpatient clinics and at home. See the Provider Directory at getpalliativecare.org.

Does palliative care have an impact on hospital and health care spending?
By delivering highly-effective, rigorously coordinated care, palliative care teams improve quality of care and quality of life. This has a direct impact on cost reduction through:

• Decreased ICU stays and pharmacy costs
• Decreased lengths of stay and unnecessary tests
• Efficiently coordinated care transitions

Center to Advance Palliative Care™
About CAPC

**The Center to Advance Palliative Care (CAPC)** is a national organization dedicated to increasing the availability of quality health care for people living with a serious illness. As the nation’s leading resource in its field, CAPC provides health care professionals and organizations with the training, tools, and technical assistance necessary to effectively meet this need.

CAPC has taken early innovation in the field of palliative care to scale, and transformed it from a “radical concept” promoted by a handful of pioneers to a must-have service. Until a little over a decade ago, palliative care was only available to those enrolled in hospice. Rarely was it available to people living with a serious illness. Today, due largely to the work of CAPC, palliative care teams are found in over 72% of all U.S. hospitals with more than 50 beds.

As the nation’s leader in providing palliative care training and implementation support, our approach has a proven, twenty-year track record. Major health care professionals, organizations, and leaders in the field know CAPC and turn to us for effective training, technical assistance, and access to peer organizations.

Growing evidence of palliative care’s impact on both quality of care and health care system sustainability is driving interest from senior health care leaders and organizations. But improving access to palliative care for all seriously ill people requires that every clinician have basic skills and that patients be able to find high quality palliative care wherever they happen to be—at home, in a nursing home, a cancer center, or a dialysis unit. It is CAPC’s clinical and operational training, technical assistance, metrics, and dissemination of best practices that help make this possible.

CAPC is a member-based organization open to all health care organizations, including health systems, hospitals, hospices, home health agencies, long-term care facilities, medical groups, health plans, and other entities. Funding is provided through organizational membership and the generous support of foundations and private philanthropy. CAPC is part of the Icahn School of Medicine at Mount Sinai in New York City.

Diane E. Meier, MD, director of the Center to Advance Palliative Care, and co-director of the Patty and Jay Baker National Palliative Care Center, is a leading pioneer in the field and was named a MacArthur Fellow in 2008.

To learn more about CAPC and its vision, please visit capc.org and getpalliativecare.org.
Dr. Diane E. Meier is founder and director of the Center to Advance Palliative Care (CAPC), a national organization dedicated to increasing the number and quality of palliative care programs in the United States. Under her leadership, the number of palliative care programs in U.S. hospitals has more than tripled over the past ten years. She is also co-director of the Patty and Jay Baker National Palliative Care Center; Professor of Geriatrics and Palliative Medicine, and Catherine Gaisman Professor of Medical Ethics at the Icahn School of Medicine at Mount Sinai.

Dr. Meier is the recipient of numerous awards, including the 2008 MacArthur Fellowship a no-strings-attached “genius award” for individuals who have shown exceptional creativity in their work. In 2017, Dr. Meier became the 32nd recipient of the National Academy of Medicine’s Gustav O. Lienhard Award for Advancement of Health Care, recognizing her achievements in driving awareness and adoption of palliative care in the United States, and success in spurring growth in the nation’s palliative care capacity. In the same year, she was the TRUST award recipient by the Health Research & Educational Trust of the American Hospital Association. In 2012, she was awarded American Cancer Society’s Medal of Honor for Cancer Control in recognition of her pioneering leadership of the effort to bring non-hospice palliative care into mainstream medicine, and received the American Geriatrics Society Edward Henderson State-of-the-Art Lecture Award in 2013. Dr. Meier was named one of 20 People Who Make Healthcare Better in the U.S. by HealthLeaders Media in 2010, when she also received an Honorary Doctorate of Science from Oberlin College. Other honors include the Founders Award of the National Hospice and Palliative Care Organization 2007, AARP’s 50th Anniversary Social Impact Award 2008, Castle Connolly’s Physician of the Year Award 2009, and the American Academy of Hospice and Palliative Medicine Lifetime Achievement Award 2009.

Dr. Meier has published more than 200 original peer-reviewed papers, and several books including, Meeting the Needs of Older Adults with Serious Illness: Challenges and Opportunities in the Age of Health Care Reform. She edited the first textbook on geriatric palliative care, as well as four editions of Geriatric Medicine. As one of the leading figures in the field of palliative medicine, Dr. Meier has appeared numerous times on television and in print, including ABC World News Tonight, Open Mind with Richard Hefner, the New York Times, the Los Angeles Times, USA Today, The New Yorker, AARP, and Newsweek. She figured prominently in the Bill Moyers series On Our Own Terms, a four-part documentary which aired on PBS.

Diane E. Meier received her BA from Oberlin College and MD from Northwestern University Medical School. She completed her residency and fellowship training at Oregon Health Sciences University. Dr. Meier has been on the faculty of the Department of Geriatrics and Palliative Medicine, and the Department of Medicine at Mount Sinai since 1983. She lives in New York City.
